

Kumar Gaurav

7079143226 | kumargaurav24kg@gmail.com | Bengaluru, India | GitHub | Portfolio | LinkedIn

Technical Skills

Languages: Python (OOP), JavaScript (ES6+), numpy, Pytorch

Core CS Fundamentals: Software Development, Object-Oriented Programming

Frontend: React.js, HTML5, CSS3, Tailwind CSS, Figma

Backend: Flask, REST API Development

Databases: MySQL, SQLite

AI/LLM: Gen AI, NLP, Deep Learning, Prompt Engineering, Pydantic (data validation)

Work Experience

Python Developer Intern | Nasya Software Technologies Pvt. Ltd. | Hyderabad *December 2025 – April 2026*

- Built and maintained **5+ full stack features** for a live product using Python (Flask) and React.js, directly improving functionality for end-users.
- Designed and delivered **RESTful APIs** consumed by the frontend; reduced manual testing time by validating all endpoints systematically using Postman.
- Debugged issues across the shared codebase using VS Code's debugger and browser dev tools, and followed Git-based version control with branching and pull requests while collaborating with a team of 10 developers

Projects

AI Portfolio Assistant | [Code Link](#)

- *Python, Groq API (GPT-OSS-120B), Function Calling, Pydantic, Prompt Engineering*
- Engineered an AI-powered portfolio assistant that answers 20+ categories of recruiter queries using LLM Function Calling and structured resume search.
- Parsed PDF/DOCX resumes into validated Pydantic models, extracting skills, education, experience, projects, and certifications through LLM-based structured outputs.
- Reduced redundant LLM processing by implementing Python-based resume search and metadata retrieval tools, avoiding repeated document parsing during conversations.
- Integrated custom function-calling tools for resume search and portfolio links, enabling accurate responses while minimizing hallucinations through verified data retrieval.

AI-Powered Resume Screening and Job-Match Tool | [Code Link](#)

- *Python, Groq API (LLM inference), Pydantic, pypdf, python-dotenv*
- AI-powered resume screening pipeline in Python that parses job descriptions and candidate resumes (PDF/DOCX) into structured data using LLM-driven extraction (Groq API, gpt-oss-120b) and Pydantic schema validation.
- Architected structured JSON extraction prompts to reliably convert unstructured job postings and resumes into typed data models, enforcing strict schema compliance and eliminating hallucinated fields.
- Implemented an automated candidate-matching and scoring system that compares parsed resumes against job requirements via LLM reasoning, generating a 0–100 match score, skill-gap analysis, and verdicts for each candidate.
- Ranked and surfaced top/bottom candidates automatically, reducing manual resume review effort by generating sorted shortlists with detailed match breakdowns for HR decision-making.

Education

Bachelor of Technology (ECE - B.Tech) | Graduated 2025 Centurion University, Bhubaneswar

Percentage: 92%

Diploma in Engineering (EEE) | Graduated 2022 Government Polytechnic Aurangabad, Bihar

Percentage: 75.8%

Intermediate (12th) | Graduated 2018 Mirza Ghalib College, Bihar

Percentage: 59%

Matriculation (10th) | 2016 D.A.V. Public School C.R. R.C, Bihar

Percentage: 83.6%

Certifications

Python Full Stack Development with GenAi — Besant Technologies, Bengaluru
